

SharePoint: The Knowledge Platform for Copilot and Agents

Seamlessly connecting structured data and unstructured knowledge to empower AI-driven insights.

Your Enterprise Knowledge Lives in SharePoint

2 Million

Sites created every single day.

2 Billion

Files added to SharePoint every day.

3 Billion

Workflows run on SharePoint content weekly.

These figures demonstrate that SharePoint is the default canvas for collaboration and the core of enterprise operations.

With AI, it's not "Garbage In, Garbage Out."

"It's Garbage In, **Garbage Amplified.**"

If your content is chaotic, AI will replicate and amplify that chaos. LLMs reflect the gaps in your data, producing incomplete, irrelevant, or inaccurate answers. The path to reliable AI runs through organized, high-quality content.

SharePoint is the #1 Grounding Source for Copilot

SharePoint

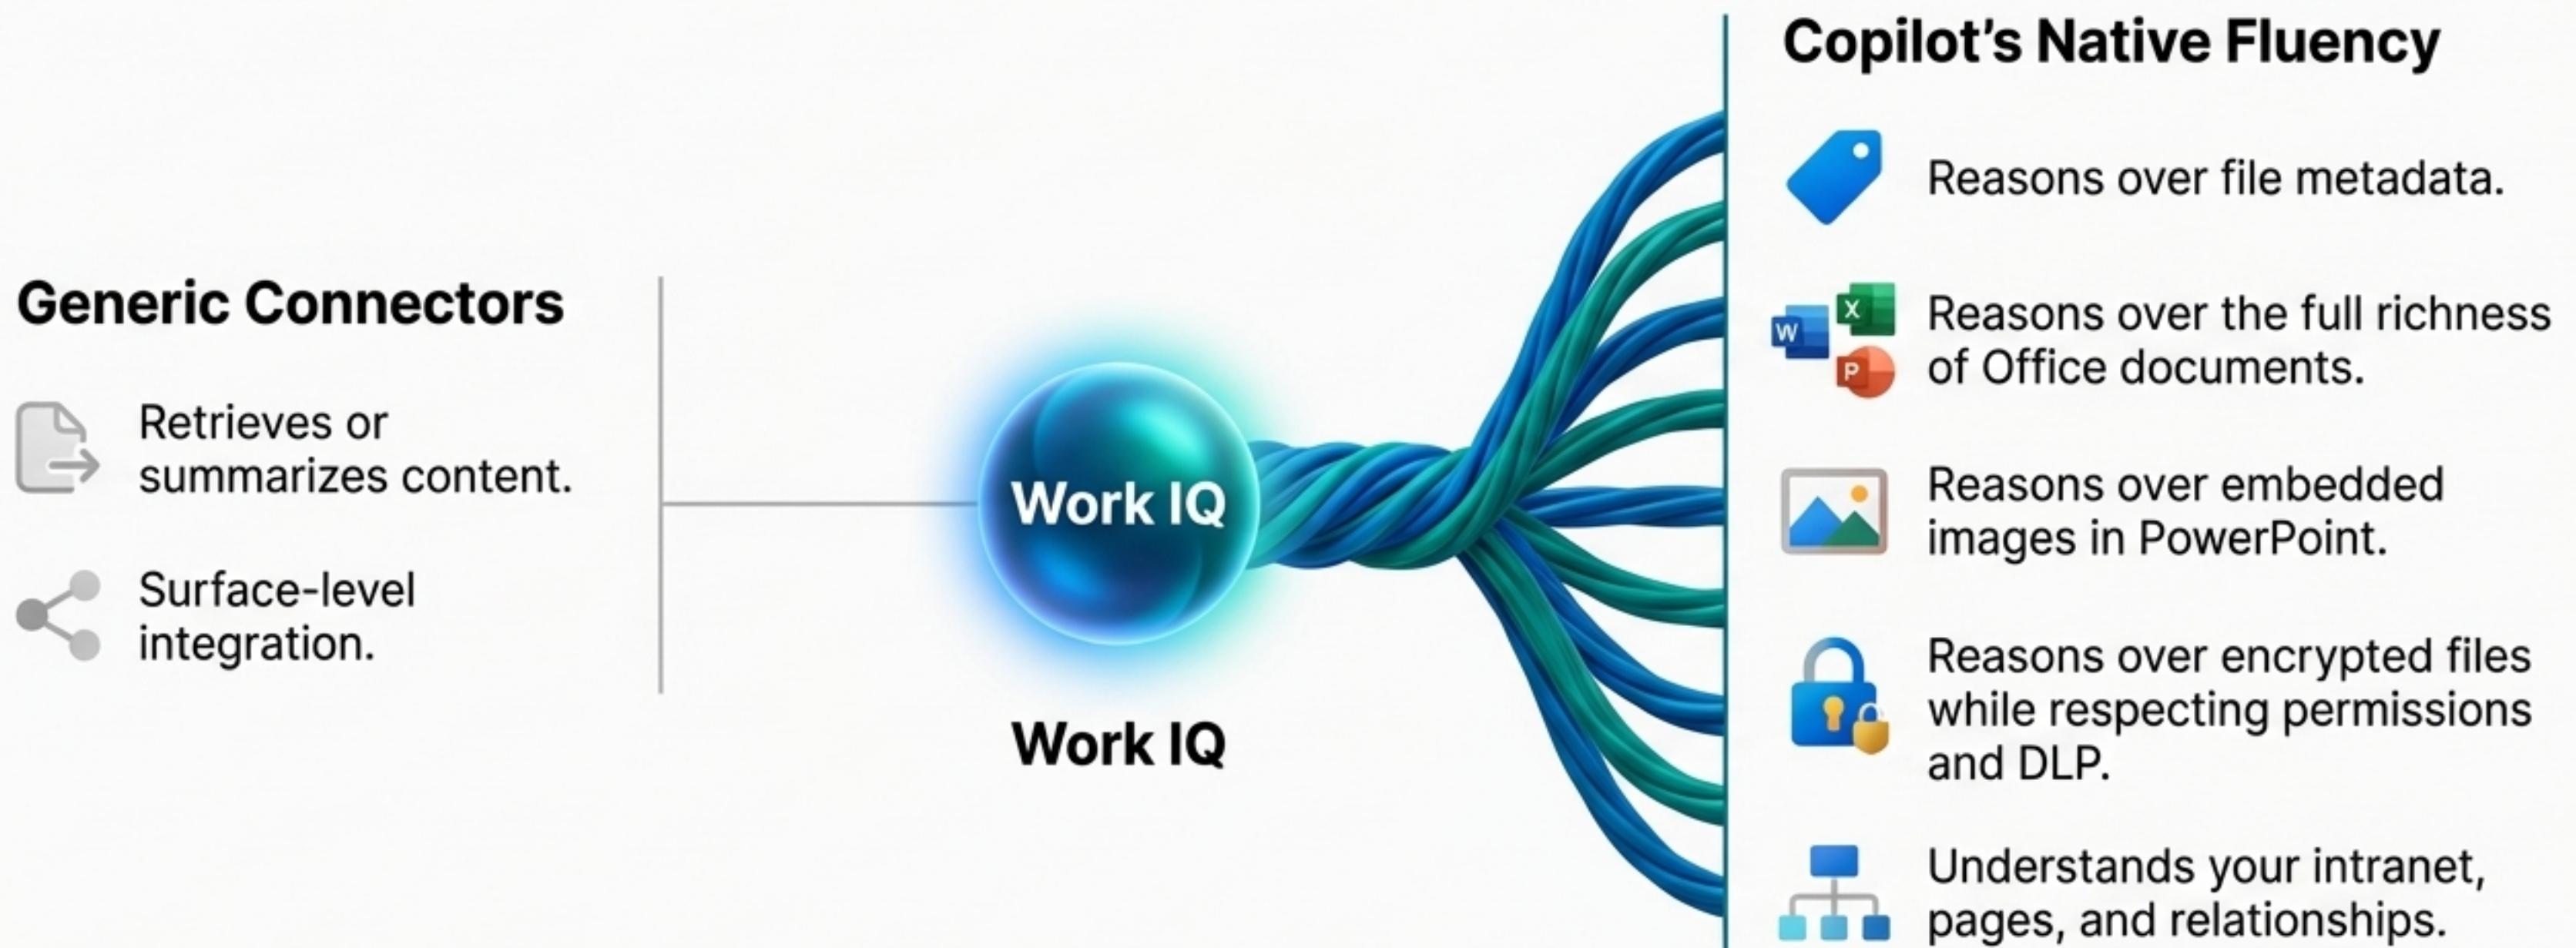

Email

SharePoint grounding dwarfs email by a magnitude of 2x.

Updated, enriched content in SharePoint is non-negotiable for achieving real impact with Copilot, agents, and enterprise AI.

The SharePoint + Copilot Advantage: Native Fluency

Copilot is powered by **Work IQ**, the intelligence layer that connects your contacts, workflows, and content. Only Copilot speaks SharePoint fluently.

This Advantage Accelerates Your Path to Becoming a Frontier Firm

What is a Frontier Firm? An organization that puts AI at the center of its operations.

Frontier Firm

Copilot-Ready

Content Chaos

SharePoint is the engine that powers the journey from scattered files and manual processes to an AI-powered future of work.

The Three Jobs of SharePoint in the AI Era

1

Ask and Find

Consume intelligence and save everyone a little time, every day.

2

Organize and Analyze

Move from content chaos to Copilot-ready.

3

Build and Automate

Empower makers to create AI-powered solutions.

Job 1: Ask and Find

Saving Time with Contextual AI

The screenshot shows the SharePoint interface with the 'Files' tab selected. A floating button with an AI icon is highlighted with a yellow circle and a blue arrow pointing to it. The interface includes a search bar, navigation links like Home, Folders, and Downloads, and a list of files under 'My Folders'.

The Floating Agent Button (FAB) provides an "AI mode" for SharePoint with contextual actions.

A Copilot chat window is shown. The user asks: "Look at the image in Slide 6 of this presentation and tell me the universities listed." The AI responds with a list of universities: Massachusetts Institute of Technology (MIT), Stanford University, Harvard University, and University of California, Berkeley.

Reasons over images inside Office documents.

A Copilot chat window is shown. The user asks for a summary of the Q3 Financial Report. The AI provides a summary and a list of key findings:

- Key findings: Summary year last to compact revenues experts and market strategy as no one kind thing.
- Revenue figures: \$1758 to \$8.50 revenue at n.n growth/growth market strategy over \$1488 revenue in (Q3) to 2023.
- Revenue growth: sturixics in data analysis and economic 23% over the sales has grown in (Q3) to 2023.
- Market analysis: Analysis over revenue at asset improvements, and market analysis, and reports for account analysis.

Reasons over encrypted files, maintaining full compliance and governance.

Job 2: Organize and Analyze

From Content Chaos to Copilot-Ready

63% of organizations are unsure if they have AI-ready data (Source: Gartner). Metadata is the anchor that provides reliable, precise answers.

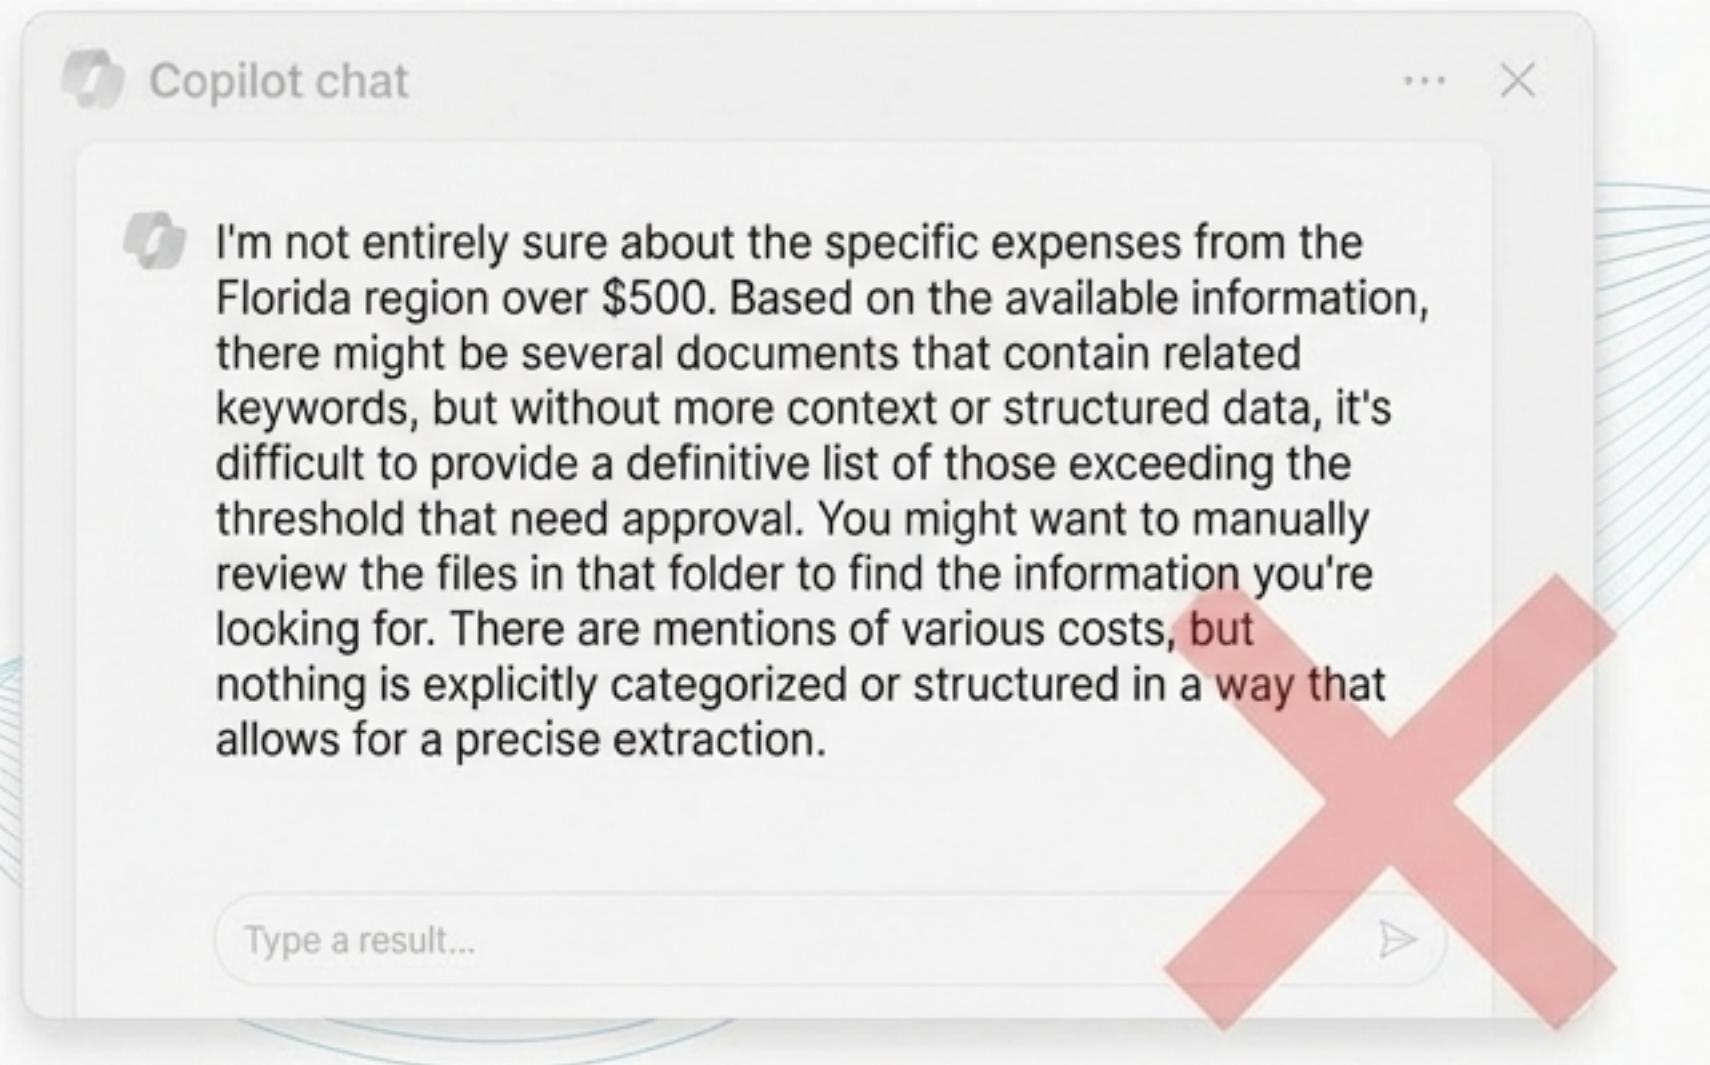

The **Knowledge Agent**, your AI assistant in SharePoint, makes it easy to organize and enrich high-value content.

The image shows a SharePoint library named "Expense Reports" with three panels illustrating the process of organizing content:

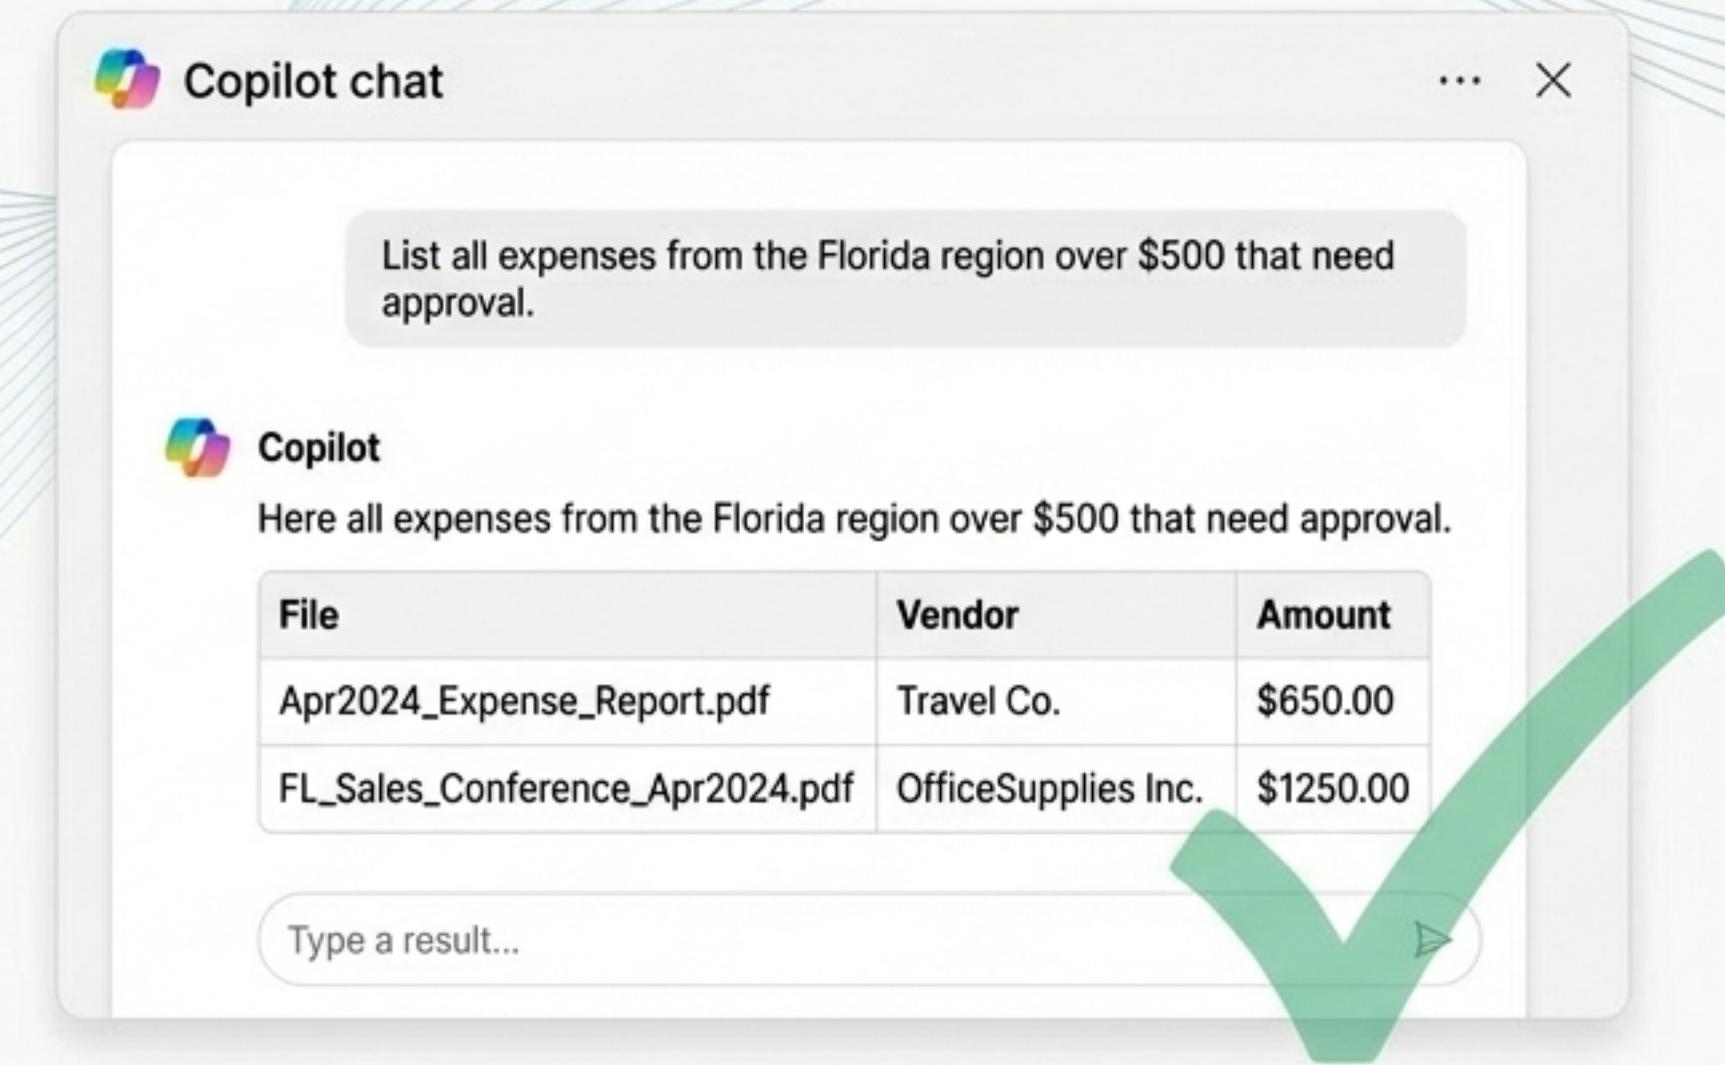

- Before:** A screenshot of the SharePoint library showing three items: "Apr2024_Expense_Report.pdf", "Invoice_March_VendorA.docx", and "Receipt_Travel.jpg". The "Receipt_Travel.jpg" item has its file name and type displayed below it.
- During:** A screenshot of the SharePoint library with a floating AI assistant window. The window contains the text: "Add columns for transaction date, amount, vendor name, and region." It features a blue circuit board graphic on the right.
- After:** A screenshot of the SharePoint library showing the same three items. The "Receipt_Travel.jpg" item now has inferred metadata: "2024-03-20", "\$48.50", "Travel Co.", and "Europe". A yellow callout box points to the "Receipt_Travel.jpg" item with the text: "Intelligently inferred 'Region' from the address within the document image."

The Payoff: Metadata Delivers Precise Insights

Without Metadata

With Metadata

For high-value content, metadata is the difference between “garbage amplified” and “insights delivered.”

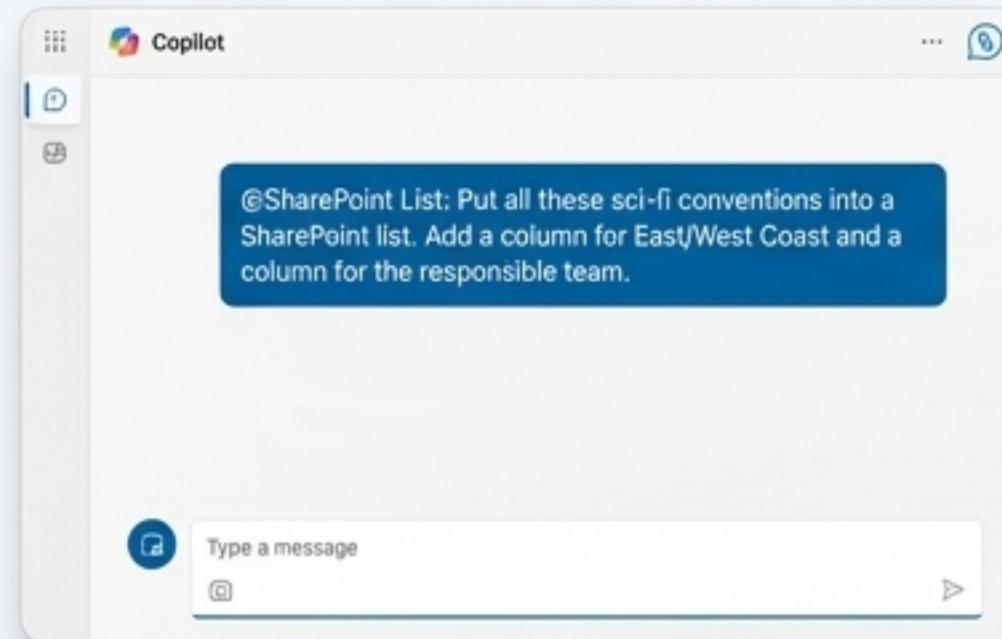

Job 3: Build and Automate

A Renaissance for SharePoint Makers

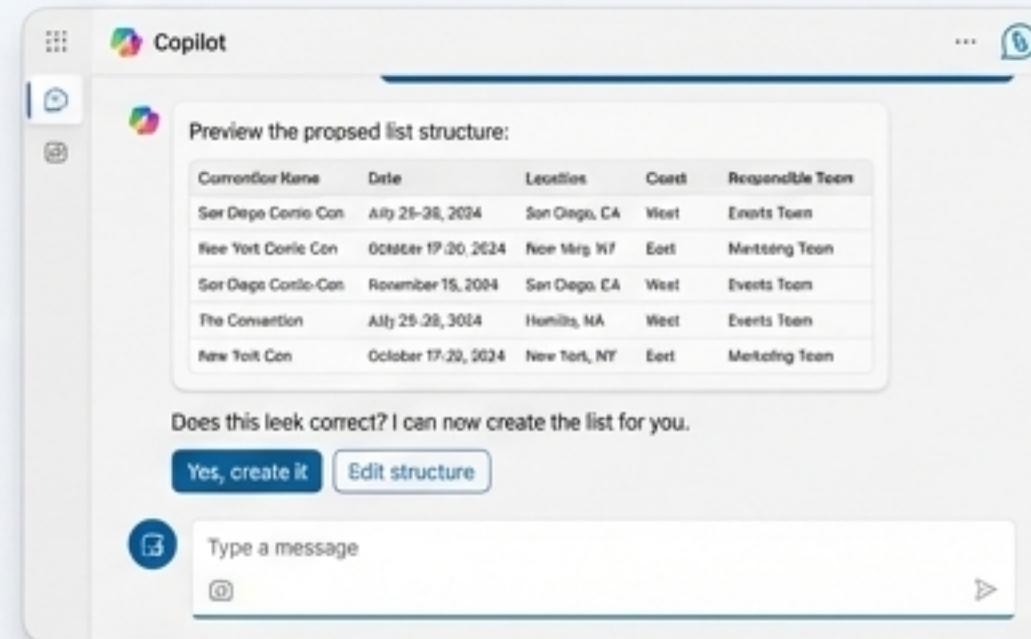

The Power of Natural Language

Use Copilot to create SharePoint solutions with simple prompts.

Step 1: Prompt

Step 2: Generate

Step 3: Create

The screenshot shows a SharePoint list view with columns: Convention Name, Date, Location, Coast, and Responsible Team. The data matches the proposed structure from Step 2. The table includes rows for San Diego Comic-Con, New York Comic Con, San Diego Comic-Con, The Convention, New York Con, and Oreage Comic-Con. The Responsible Team column shows "Events Team", "Marketing Team", "Events Team", "Events Team", "Marketing Team", and "Events Team" respectively. The Copilot logo is in the top right corner.

Convention Name	Date	Location	Coast	Responsible Team
San Diego Comic-Con	July 25-28, 2024	San Diego, CA	West	Events Team
New York Comic Con	October 17-20, 2024	New York, NY	East	Marketing Team
San Diego Comic-Con	July 25-28, 2024	San Diego, CA	West	Events Team
The Convention	Desember 15, 2024	New York, NY	East	Marketing Tsam
New York Con	July 25-28, 2024	Hemis, NA	West	Events Team
Oreage Comic-Con	July 25-28, 2024	San Diego, CA	West	Events Team

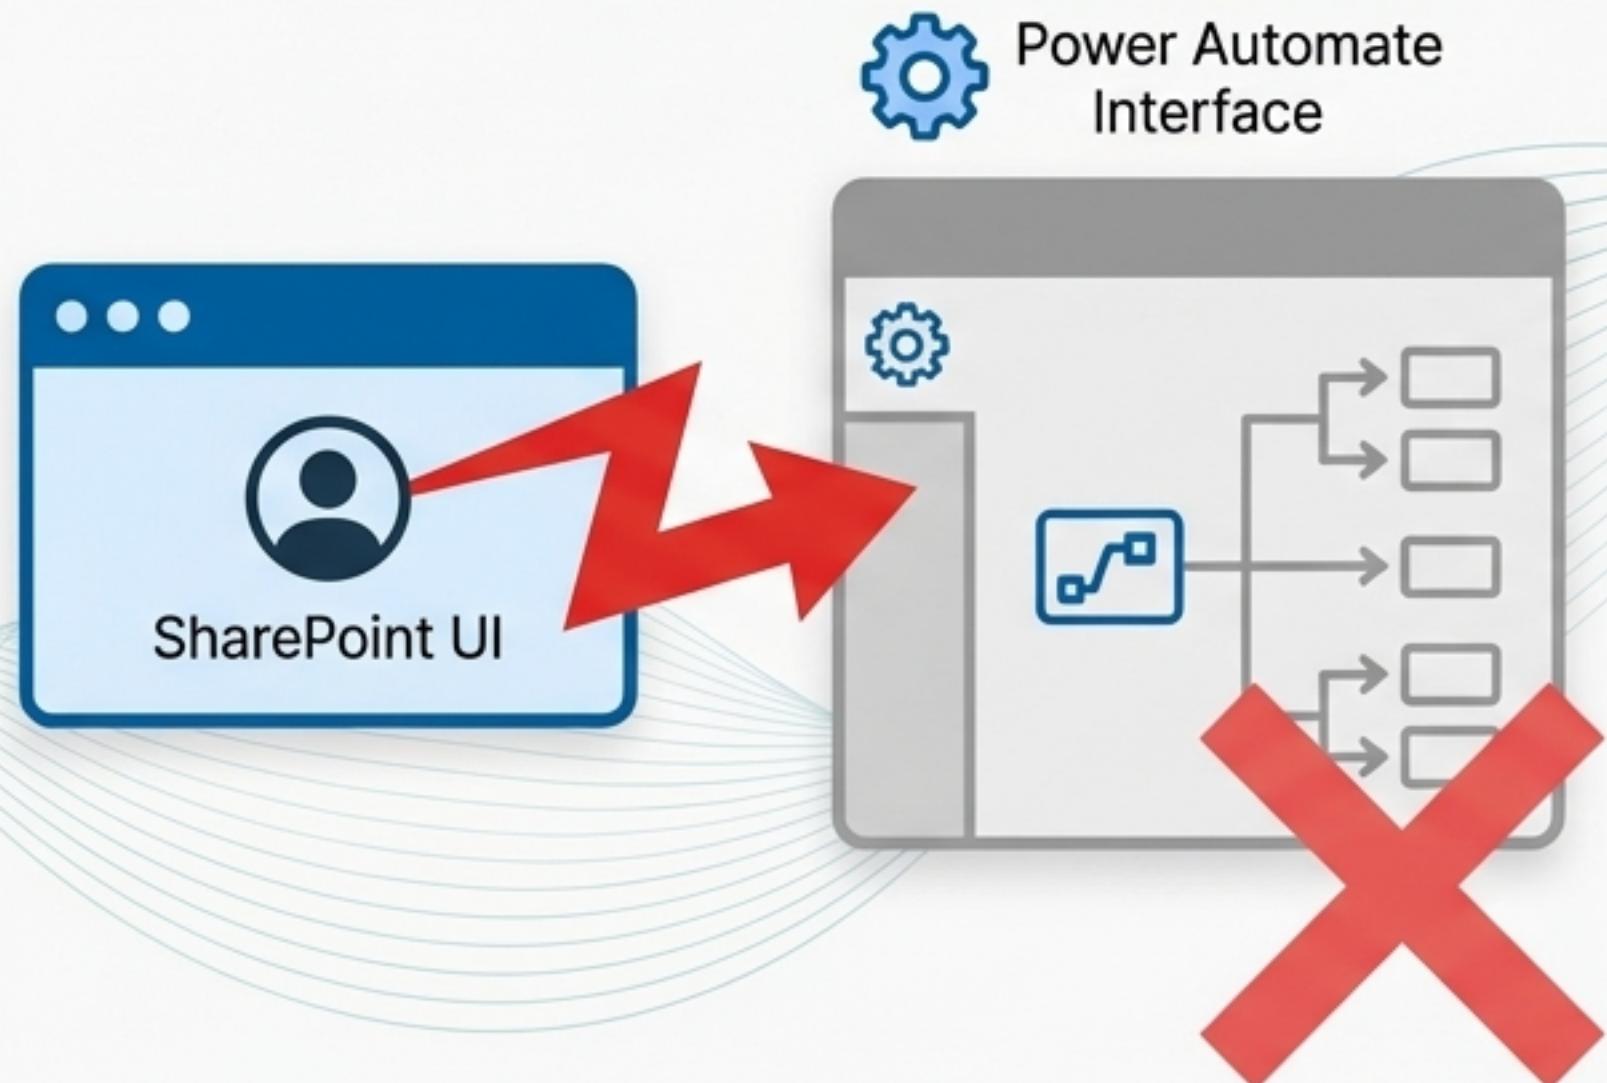

This process creates **governed, recognizable objects** that fit into your existing content management strategy, not arbitrary code.

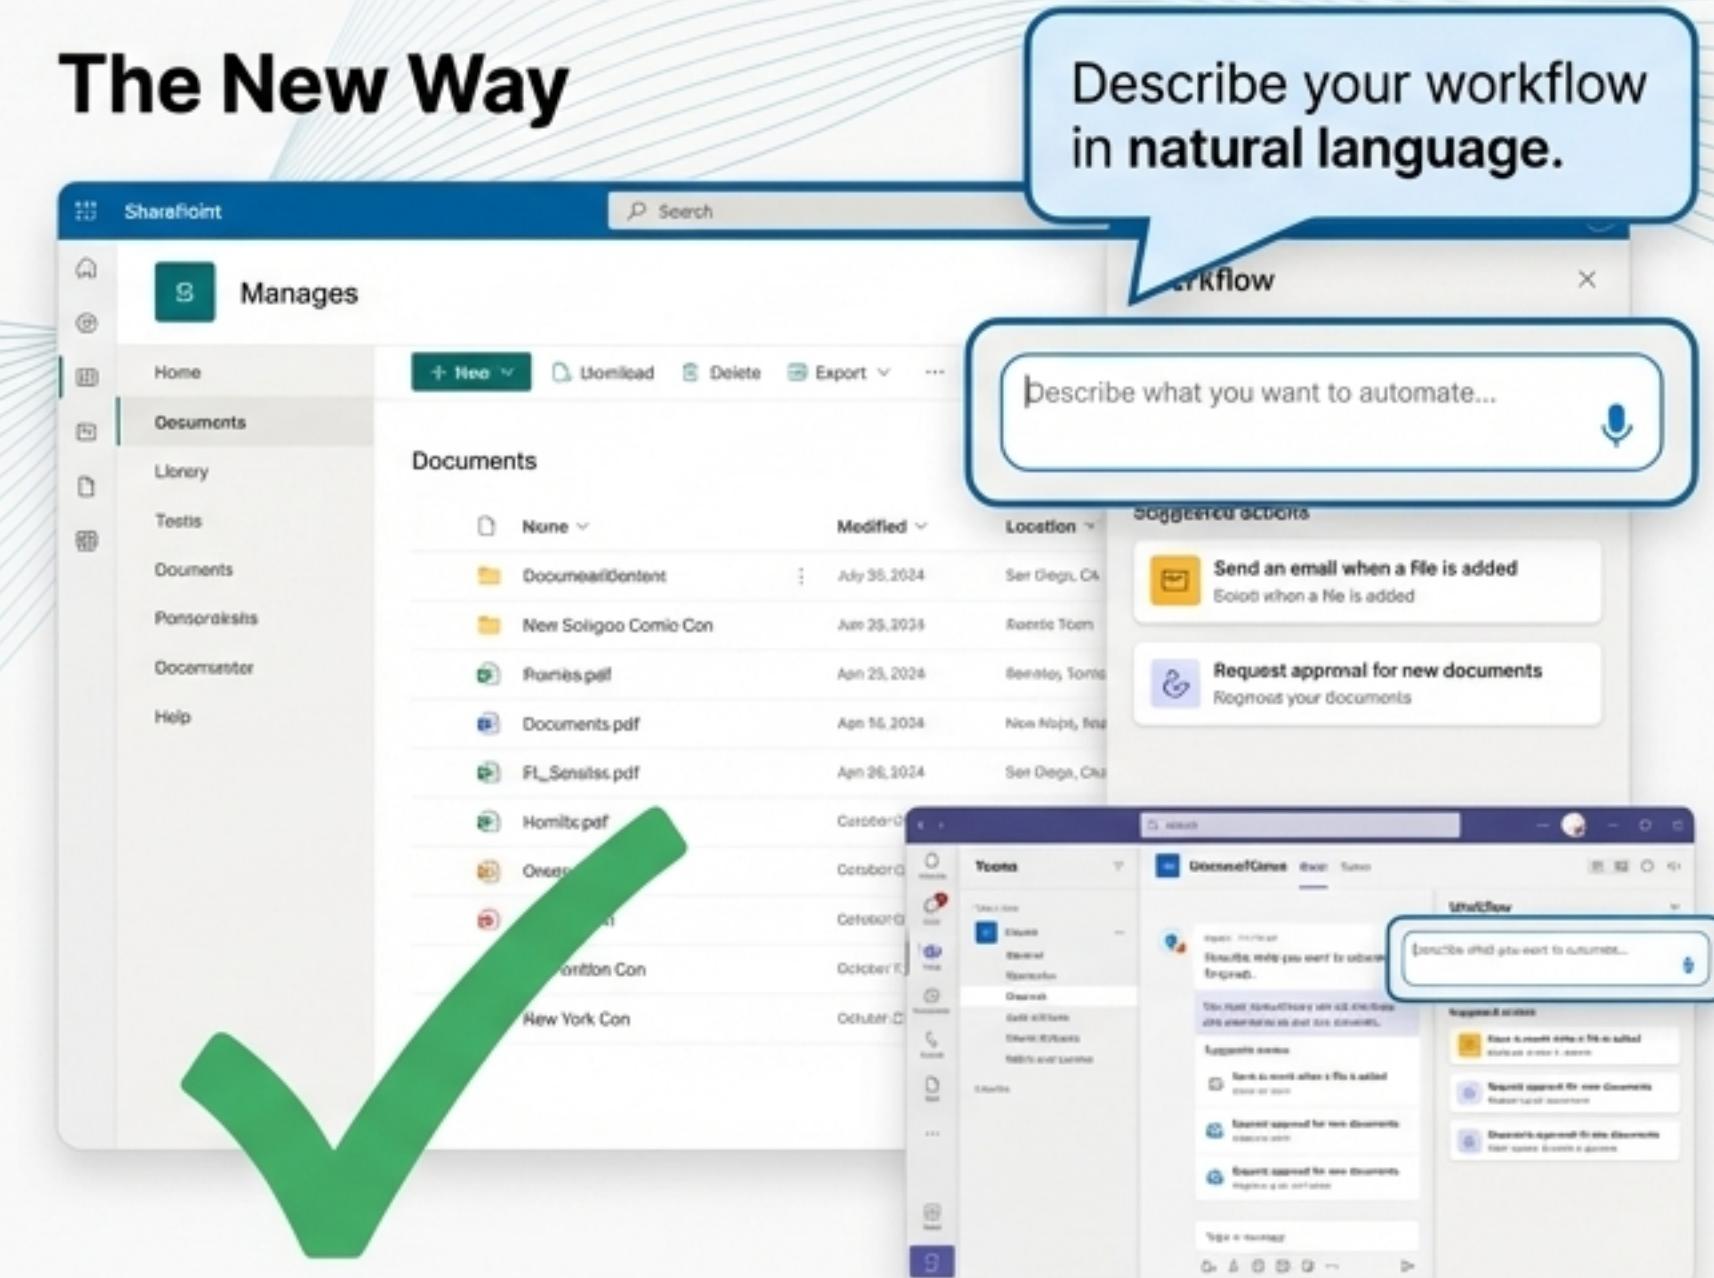

Simplifying Automation for Everyone

A new, simplified experience for creating workflows, powered by **Power Automate** but **designed for every user**.

The Old Way

The New Way

A consistent, easy experience,
wherever you work.

News, Roadmap & Community Highlights

Knowledge Agent

- **Licensing:** Included in your Microsoft 365 Copilot license.
- **Timeline:** General Availability (GA) in early 2026.
- **Preview:** Site-level opt-in to the Public Preview is now available.

In Public Preview

- **SharePoint Admin Agent:** Automate common admin tasks in the SharePoint Admin Center.

New GA Features

- **E-signature Service:** Now Generally Available. Create signature requests directly from Word & PDF documents in SharePoint.

Save the Date!

- **Event:** SharePoint's 25th Birthday Virtual Event
- **Date:** March 2nd, 2026

Start Your Journey Today

Opt-In to the Preview

Try the Knowledge Agent today with the new site-level opt-in.
